

Advanced Video Goes High Definition

We have recently added a suite of high definition video products to our rental inventory. These capabilities now allow you to produce content for your event in HD and display stunning results to your audience.

Advanced Video now has 16 X 9 screens to compliment our new Christie Digital 3-chip DLP 10K HD projectors.

And that's not all.

We have just received the first of our HD cameras, the Panasonic AG-HMC150 HD video camera. This camera records to a standard SD video card. It has HDMI output which can be converted to SDI utilizing coax cable to deliver the signal to projectors, switchers, etc.

We will be adding a second higher end P2 camera in the 4th quarter.

To round out the suite we have also added the Panasonic AV-HS400AN Multi Format video switcher including a composite input module allowing for use of standard video if needed.

And to make the capabilities even sweeter, we have the Panasonic AGHPG20PJ portable digital P2 recorder. So say goodbye to recording your event on tape because it can now be true digital. Even in the field.

So what does this mean?

Newer brighter projection in true HD

Wide screen format

True HD switching and recording completely integrated with our new Folsom presentation switch package

PowerPoint in widescreen at 1024 X 1280

No matter what input signal we get, Advanced Video can display it in the correct format and HD to bring you stunning visuals; enhancing your meeting experience. Or if you are only interested in producing your own HD video, we have the necessary gear for that as well.

So come on over to the digital revolution in meetings and make the move to high definition. Your message will be brighter and clearer. Seeing is definitely believing.
